*Physical AI & Industrial IoT GTM Leader | Agentic AI | OT/IT Convergence | Industry 4.0 | Revenue Architecture*

West Islip, NY, United States | [LinkedIn Profile](#) | Open to VP GTM / SVP Revenue / CRO Opportunities

---

## ABOUT

The machines are waking up — and most companies are completely unprepared for what comes next. Physical AI is not an incremental upgrade. It is a foundational restructuring of how industrial operations think, respond, and compete. The executives who will win the next decade are not the ones who understand the technology. They are the ones who can build the commercial engine around it.

That is what I do.

I am a category-defining GTM executive operating at the intersection of Physical AI, Industrial IoT, and Agentic AI — three forces that, together, are rewriting the rules of industrial performance. My career has been built on one core discipline: taking technically complex, architecturally rich solutions and turning them into revenue. Not eventually. Repeatably, at scale, and with urgency.

I have built GTM teams from the ground up, designed partner ecosystems that outlived any single deal, created category narratives that moved enterprise buyers from curiosity to commitment, and architected revenue engines across some of the most demanding industrial verticals on earth — manufacturing, energy, industrial automation, smart factories, and oil & gas. I do not inherit momentum. I create it.

My superpower is translation. When a Chief Operations Officer at a Tier 1 manufacturer stares at a slide deck about edge inference, real-time digital twins, or autonomous process control, their first instinct is skepticism. My job — and my genuine edge — is collapsing the distance between what the technology can do and what the buyer actually needs to hear to say yes. I speak OT and IT. I speak board-level and plant-floor. I speak pipeline and product roadmap simultaneously.

We are at an inflection point. OT/IT convergence has crossed from concept to operational imperative. Industrial autonomy is no longer a five-year roadmap item — it is a competitive survival question. Cyber-physical resilience has become as urgent as cybersecurity was in 2015. The leaders who can orchestrate

GTM strategy across this terrain — who can build category, generate pipeline, and close enterprise deals in the same breath — are extraordinarily rare. I am one of them.

If you are building or scaling a Physical AI or Industrial IoT company and you need a VP GTM, SVP Revenue, or CRO who can walk into any room — customer, board, or analyst — and make the case for your category with clarity and conviction, let us connect. The window to define this space is open. It will not be open forever.

---

## FEATURED

### **Silicon Meets Steel: Why Physical AI is the Next \$500B Industrial Category**

Article | Published on LinkedIn

A deep-dive into why Physical AI — the convergence of edge inference, robotics, and real-time sensor intelligence — is not another enterprise software wave. It is the first technology paradigm built for atoms, not bits. This article maps the commercial landscape, identifies the GTM fault lines, and makes the case for why the category will be defined in the next 24 months — or not at all.

### **GTM Playbook: Winning in OT/IT Convergence Markets**

Document | Executive Resource

A practitioner's guide to building and executing GTM strategy in markets where operational technology and information technology meet. Covers buyer persona mapping across the OT/IT divide, deal-structuring for enterprise industrial accounts, partner ecosystem architecture, and the category narrative frameworks that actually move industrial buyers to action.

### **Board Memo: The Industrial Autonomy Imperative**

Document | Board-Level Strategic Brief

Written for executive and board audiences, this memo frames industrial autonomy as a strategic non-negotiable — not a technology investment. Covers the competitive cost of inaction, the

readiness framework for autonomous operations adoption, and the GTM and partnership levers available to companies seeking to lead rather than follow in the Physical AI transition.

## EXPERIENCE

### VP, GTM Strategy & Revenue – Physical AI Division

#### Open to Opportunities

2026 – Present | West Islip, NY (Remote / Hybrid / Relocatable)

I am actively seeking a VP GTM or equivalent executive mandate at a Physical AI or Industrial IoT company where the category still needs to be built — commercially, narratively, and operationally. My focus is on organizations serious about compressing the distance between technical differentiation and enterprise revenue, and willing to invest in the GTM infrastructure required to win at scale.

The role I am designed for combines category creation, enterprise pipeline architecture, and cross-functional revenue leadership — from first call to board-level strategic partnerships.

- Targeting organizations with \$20M–\$200M ARR in Physical AI, Industrial IoT, or adjacent spaces seeking to accelerate GTM velocity and expand enterprise market share across manufacturing, energy, and critical infrastructure.
- Bringing a proven playbook for OT/IT convergence GTM: buyer mapping, channel build-out, category narrative development, and enterprise deal architecture across 6–18 month sales cycles.
- Available to lead cross-functional revenue teams of 10–30 people spanning sales, solutions engineering, partner development, and sales enablement.
- Open to VP GTM, SVP Revenue, Chief Revenue Officer, and GM conversations — particularly at Series B through pre-IPO stage companies where GTM leadership is a board-level priority.

### Senior Director, GTM & Revenue Strategy – Industrial IoT

#### Previous Executive Role

2023 – 2026 | 3 Years

Brought in to rebuild a fragmented commercial function and establish a coherent GTM motion for an Industrial IoT platform competing in markets defined by long buyer cycles, entrenched incumbents, and an OT/IT divide that most vendors failed to bridge. Within 18 months, transformed a reactive sales organization into a proactive, category-led revenue engine with consistent enterprise pipeline generation and measurable expansion economics.

Built and led an 18-person cross-functional GTM team — spanning enterprise sales, solutions engineering, partner alliances, and market intelligence — establishing the organizational foundation for scalable, repeatable revenue growth across manufacturing, utilities, and process industries.

- Grew annual recurring revenue from \$18M to \$40M ARR over 30 months — a 122% lift — by redesigning the enterprise sales motion, redefining the ideal customer profile, and aligning product positioning to the language of industrial operations buyers.
- Built and managed an 18-person GTM organization from scratch, including hiring, structure design, quota architecture, onboarding, and a competency framework that reduced new-hire ramp time by 35%.
- Established the company's first formal OT/IT Convergence Council — an executive advisory group of 12 industrial operators and technology leaders — which directly influenced product roadmap prioritization and generated six enterprise pilot agreements valued at \$8.2M combined.
- Designed and launched a tiered partner ecosystem across 22 system integrators and 4 hyperscaler alliance programs, which contributed 38% of net-new pipeline in year two of operation.
- Authored the company's first category narrative framework — repositioning the platform from "IoT middleware" to "Industrial Intelligence Infrastructure" — which increased inbound enterprise inquiry rate by 61% and shortened average qualification-to-proposal timelines by 28 days.

## **Director of Sales Engineering & Solutions – Edge AI**

[Previous Role](#)

2020 – 2023 | 3 Years

Joined to solve a structural problem: a technically sophisticated Edge AI platform with a solutions team that could demo brilliantly but could not close enterprise deals at scale. Rebuilt the sales engineering function around commercial fluency — equipping engineers to own the value conversation, not just the technical proof, and creating the ROI and business case frameworks that gave enterprise buyers the internal ammunition to get deals approved.

Simultaneously led Industry 4.0 market enablement, translating smart factory principles into customer-ready solution architectures across discrete and process manufacturing environments.

- Sourced and closed \$22M in net-new enterprise logos across 14 accounts in manufacturing, food & beverage, and industrial chemicals — representing the largest net-new expansion in company history at the time.
- Built a repeatable ROI framework for Edge AI deployments that quantified total cost of inaction against deployment investment — reducing average proof-of-concept-to-contract conversion time by 42 days and increasing win rates on competitive bids by 29%.
- Developed and delivered an Industry 4.0 enablement curriculum used by 65 customer stakeholders across 11 accounts, accelerating executive alignment on smart factory investments and accelerating procurement cycles.
- Partnered with product and engineering to translate 14 customer proof-of-concept outcomes into documented solution blueprints, which became the foundation for the company's Enterprise Reference Architecture library — now used across all enterprise sales engagements.

## **GTM Manager – Industrial IoT & Connected Operations**

### **Earlier Role**

2017 – 2020 | 3 Years

Managed GTM execution across an Industrial IoT connected operations portfolio, with responsibility spanning direct sales, channel partnerships, and vertical market entry. This role sharpened every foundational GTM instinct — from territory strategy and partner incentive design to the art of selling operational transformation to buyers conditioned to buy equipment, not platforms.

Led the company's first deliberate vertical entry into oil & gas, establishing the relationships, reference accounts, and solution positioning that created a durable commercial presence in a sector the company had never previously penetrated.

- Achieved 137% of annual quota in year two, driven by a combination of refined enterprise discovery methodology, an expanded partner-led motion, and disciplined account-based pursuit across key manufacturing and energy accounts.
- Designed and launched the company's first structured channel partner program — including tiering, margin architecture, co-selling playbooks, and quarterly business review cadences — resulting in a 44% increase in partner-sourced pipeline within 12 months.
- Led oil & gas vertical entry strategy, establishing four lighthouse accounts across upstream and midstream operations — creating the customer base, case studies, and solution credibility that enabled the company to compete in the sector for the first time.

RECOMMENDATIONS

VP of Engineering / CTO – Industrial Technology Company

Colleague & Cross-Functional Partner | 3 Years Working Relationship

"There is a vanishingly small population of GTM executives who can sit in a room with a Chief Architect and a Chief Operations Officer simultaneously — and be credible to both. Muhammad is one of them. In three years of working alongside him, I watched him do something I have rarely seen: he consistently translated our most technically complex capabilities into commercial narratives that industrial buyers could act on. He did not dumb things down. He made them land. When we were developing our edge inference architecture, Muhammad was in the room asking the right engineering questions — not because it was his job, but because he understood that a GTM leader who cannot interrogate the product cannot honestly sell it. That intellectual honesty, combined with his sheer commercial velocity, is what makes him genuinely rare. He is not a 'technical enough' sales leader. He is a strategic executive who happens to speak both languages fluently. Any technology organization that gets him is getting an unfair advantage."

## **CEO / Board Member – Industrial IoT Platform Company**

Executive Leader | Direct Reporting Relationship

"When I hired Muhammad, we had a product that was technically ahead of the market and a commercial organization that was not. Eighteen months later, we had \$40M ARR, a functioning partner ecosystem, a GTM team that knew how to win, and a category narrative that was starting to appear in analyst reports. That is not luck. That is what happens when you put a genuine GTM architect in charge and get out of his way. What I value most about Muhammad — beyond the revenue numbers, which speak for themselves — is his strategic range. He could present to my board on category positioning in the morning, run a QBR with the channel team in the afternoon, and coach a sales engineer on a competitive deal at the end of the day. He never treated those as separate jobs. He understood that GTM leadership is systemic — that every motion, every message, and every hire compounds over time. Muhammad compounds. He makes everyone around him better and every commercial decision more intentional. He would be an exceptional VP GTM, SVP Revenue, or CRO for any company serious about winning in Physical AI or Industrial IoT."

---

EDUCATION

**MBA – Business Strategy & Technology Management**

Graduate School of Business | Focus: Strategic Marketing, Technology Commercialization, and Organizational Leadership

Graduate coursework concentrated on the intersection of emerging technology strategy, go-to-market design, and enterprise leadership — with applied case work in industrial technology sectors, B2B revenue models, and digital transformation.

**B.S. – Electrical & Computer Engineering**

School of Engineering | Focus: Digital Systems, Control Systems, and Embedded Computing

Undergraduate foundation in electrical systems, microprocessor architecture, signal processing, and control theory — the engineering substrate that informs Muhammad's ability to engage credibly with OT architects, systems integrators, and industrial technology teams at a technical level.

## Open to Opportunities — VP GTM | SVP Revenue | CRO

I am actively engaged in conversations with Physical AI and Industrial IoT companies at the Series B through pre-IPO stage who are ready to invest in executive GTM leadership. If your company is building something technically serious in this space and needs a revenue leader who can create the category, build the team, and close the enterprise — I want to hear from you.
